

Fertigator

Utilizes advanced Crop Cycle Awareness for automatic fertilizer adjustments up to 16 plant fields.

Cloud-based precision fertigation with real-time updates and secure recipe management. Adaptable EC/pH-based dosing mechanisms for precise nutrient delivery, accessible remotely.

Energy-efficient, scalable design promoting sustainable farming practices.

Comprehensive reporting, analytics, and after-sales support for optimized yield

Climate Controller

Optimizes greenhouse conditions for maximum yield by controlling temperature, humidity, lux, and CO₂ levels.

Enables real-time monitoring of climate data via cloud connectivity from anywhere, accessible through the AiGROW mobile app.

Provides a user-friendly interface for easy management and optimization of climate settings. AI-ready analytics to identify trends for improved efficiency.

Seamlessly integrates with existing setups for cost-effective advanced climate control.

Features 12 customizable channels, ensuring flexibility and scalability for greenhouse operations.

Climate Sensor

ADD ON

Grow Light

Full Spectrum Coverage: Mimics natural sunlight with wavelengths from 360 nm to 870nm, including Hyper Red, Far Red, UV, and IR bands.

Growth Mode Options: Tailored modes for vegetative reproduction, growth, and foliage growth stages.

Easy Installation: Hangs effortlessly for flexible placement in greenhouse setups.

Durable Build: Aluminum housing ensures longevity in greenhouse environments.

Efficient Power Usage promotes energy efficiency.

Energy Meter

Tracks energy consumption (kWh), voltage(V), current(A) , power factor, reactive power (VAR), and demand (kW) efficiently.

Provides real-time readings and essential metrics on its LCD screen for easy monitoring.

Meets the IEC 62053-21 standard, ensuring accuracy and reliability in energy measurement. Compatible with the AiGROW mobile app, allowing for convenient remote monitoring and management.

Offers data display and communication features necessary for effective energy management.

Ensures ease of use and accessibility for operators, promoting efficient energy monitoring and control.

Water Meter

Equipped with Accurate sensors to measure water level and consumption

Tracks Daily, Monthly, or yearly water consumption.

Provides real-time readings and essential metrics on AiGROW mobile app, Allowing for convenient remote monitoring and management of water.

Provides the ability to Automatically operate various pumps based on available water resources, Schedule or Manual Mode

Hand Held EC pH Meter

Measures pH, conductivity, TDS and temperature on the go

Brilliantly simple design that's easy to use, clean and calibrate

Backlit display to capture every measurement with ease

Includes a pH Probe and Conductivity Probe to cover all your nutrient uptake fundamentals

Two replacable probes to measure pH and EC
